

## BEST PRACTICES

The primary goal of elementary education is to address the fundamental learning needs of children in an Inclusive school environment. Primary Teachers' Training combines practical training in classroom instruction. The appropriate training is crucial for aspiring our students so that they are equipped with essential pedagogical techniques, classroom management skill and a deep understanding of child development. Through out the year various programmes are organized in our Institute to develop their responsibilities and duties. But the main purpose of this training is based on practices. Therefore PBTLE is arranged in classroom in the Institute and the students of our Institute are sent to Primary schools for teaching practices for a long time.

These workshops are arranged for students in our Institute before the teaching practices. Students are mainly given practices in these workshops.

- a) How to create Lesson Plan and what kind of writing will be on its cover page.
  - b) How to write Lesson note and others practical note book .
  - c) They should be elegant in their behavior in schools during teaching practices.
  - d) The students are taught through LTM making workshops how they can make learning easier, more interesting and effective for children in the classroom.
  - e) How to teach by following 5E model through various methods like Dramatic method, Project method, Co-relation method, Story-telling method etc.
  - f) Finally, emphasis should be placed on the desire learning abilities of the students.
- Thus, teaching practice is arranged through out workshops for the students every year so that they can be successful teachers in future.
